Blackhawk School District

CURRICULUM

Course Title: Fundamentals of Algebra I
Grade Level(s): 9-10
Length of Course: Year
Faculty Author(s): Bob Amalia, Heather McCowin
Date: Revised November 2011

COURSE DESCRIPTION: This course introduces the concepts covered in Algebra 1. Students who need reinforcement of their Algebra skills should take this course before taking the Algebra 1 course. Students must have completed PreAlgebra or Math 8.

Common Core State Standards for Mathematics

Research studies of mathematics education have determined that mathematics curriculum must be more focused and coherent. The Common Core State Standards for Mathematics define what students should understand and be able to do in their study of math. The following Standards for Mathematical Practice describe varieties of expertise that mathematics educators at all levels should seek to develop in their students. These practices rest on important 'Processes and proficiencies" with longstanding importance in mathematics education.

1. **Make sense of problems and persevere in solving them.**
   Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

2. **Reason abstractly and quantitatively.**

   Mathematically proficient students make sense of quantities and their relationships in problem situations. They bringtwo complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize – to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents – and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

3. **Construct viable arguments and critique the reasoning of others.**

   Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about date, making plausible arguments that take into account the context from which the date arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and – if there is a flaw in an argument – explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

4. **Model with mathematics.**

   Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or us a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

5. **Use appropriate tools strategically.**

   Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

6. **Attend to precision.**

   Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

7. **Look for and make use of structure.**

   Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Late, students will see 7 x 8 equals the well-remembered 7 x 5 + 7 x 3, in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$, older students can see the 14 as 2 x 7 and the 9 as 2 +7. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see $5 – 3(x – y)^2$ as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers x and y.

8. **Look for and express regularity in repeated reasoning.**

   Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation $(y – 2)/(x – 1) = 3$. Noticing the regularity in the way terms cancel when expanding $(x – 1)(x +1)$, $(x – 1)(x^3 + x^2 + x +1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process while attending to the details. They continually evaluate the reasonableness of their intermediate results.

Unit Breakdown	Objectives	Common Core Standards	PSSA Standards
Connections to Algebra	• Write and evaluate expressions, equations, and inequalities. • Apply the order of operations. • Use a problem-solving plan to solve real-world problems. • Represent functions as rules and as tables.	• CC.9-12.N.Q.1 • CC.9-12.N.Q.2 • CC.9-12.N.Q.3 • CC.9-12.A.SSE.1 • CC.9-12.A.CED.3 • CC.9-12.F.IF.1	• A1.2.1.1.2 • A1.2.1.1.3 • A1.2.1.2.2 • A1.1.2.1.1 • A1.1.2.1.1 • A.1.1.2.1.3
Properties of Real Numbers	• Classify real numbers. • Compare and order integers and rational numbers. • Perform basic operations. • Apply properties to evaluate and simplify expressions. • Use the distributive property to write equivalent expressions.	• CC.9-12.7.NS.1 • CC.9-12.7.NS.2 • CC.9-12.7.NS.3	• A.1.1.1.1.1 • A.1.1.1.3.1
Solving Linear Equations	• Use properties of equality to solve one-step, two-step, and multi-step equations in one variable. • Use properties of equality and the distributive property to solve equations with variables on both sides. • Write ratios and proportions. • Solve proportions using cross products. • Solve percent problems, such as finding the percent of a number, a base, and part of a base. • Rewrite equations in function form. • Solve formula and literal equations for a given variable.	• CC.9-12.N.RN.3 • CC.9-12.N.Q.1 • CC.9-12.N.Q.2 • CC.9-12.A.CED.1 • CC.9-12.A.CED.4 • CC.9-12.A.REI.1 • CC.9-12.A.REI.3 • CC.9-12.A.REI.11	• A.1.1.2.1.1 • A.1.1.2.1.2 • A.1.1.2.1.3 • A.1.1.1.4.1
Graphing Linear Equations & Functions	• Plot points in a coordinate plane. • Use tables, *x*- and *y*-intercepts, and the slope and *y*-intercept to graph linear equations and functions. • Interpret slope as a rate of change in real-world situations and explore how changing the slope and *y*-intercept changes the graph. • Use slope to identify parallel lines. • Write and graph direct variation equations and use them to solve real-world problems. • Use function notation.	• CC.9-12.N.Q.1 • CC.9-12.A.CED.2 • CC.9-12.A.REI.10 • CC.9-12.A.REI.11 • CC.9-12.A.REI.3 • CC.9-12.F.IF.1 • CC.9-12.F.IF.2 • CC.9-12.F.IF.4 • CC.9-12.F.IF.5 • CC.9-12.F.IF.6 • CC.9-12.F.IF.7 • CC.9-12.F.BF.3 • CC.9-12.S.ID.6 • CC.9-12.S.ID.7	• A.1.1.2.1.1 • A.1.1.2.1.2 • A.1.1.2.1.3 • A.1.2.1.1.1 • A.1.2.1.1.2 • A.1.2.1.1.3 • A.1.2.1.2.1 • A.1.2.1.2.2 • A.1.2.2.1.1 • A.1.2.2.1.2 • A.1.2.2.1.4

Writing Linear Equations	• Write equations of lines in slope-intercept form given: the slope and *y* -intercept; the slope and a point; or two points. • Write and graph equations using the slope and a point, using a graph of the line, or using real-world data. • Write equations of lines in standard form, and use these equations to solve real-world problems. • Write and find equations of lines parallel or perpendicular to a given line. • Make scatter plots of data. • Use lines of fit and the best-fitting line to model data and to make predictions.	• CC.9-12.A.CED.2 • CC.9-12.A.CED.3 • CC.9-12.F.IF.3 • CC.9-12.F.IF.4 • CC.9-12.F.IF.5 • CC.9-12.F.IF.6 • CC.9-12.F.IF.7 • CC.9-12.F.BF.1 • CC.9-12.F.BF.2 • CC.9-12.F.BF.3 • CC.9-12.F.LE.2 • CC.9-12.F.LE.5 • CC.9-12.G.GPE.5 • CC.9-12.S.ID.6 • CC.9-12.S.ID.7 • CC.9-12.S.ID.8 • CC.9-12.S.ID.9	• A.1.1.2.1.1 • A.1.1.2.1.2 • A.1.1.2.1.3 • A.1.2.2.1.2 • A.1.2.2.1.3 • A.1.2.2.1.4 • A.1.2.2.2.1 • A.1.2.3.2.3
Solving and Graphing Linear Inequalities	• Write, solve, and graph one-step and multistep inequalities using addition, subtraction, multiplication, and division. • Reverse an inequality sign when multiplying or dividing by a negative number. • Solve and graph compound inequalities using *and* and *or*. • Solve absolute value equations. • Graph linear inequalities in two variables.	• CC.9-12.A.CED.1 • CC.9-12.A.CED.3 • CC.9-12.A.REI.3 • CC.9-12.A.REI.10 • CC.9-12.A.REI.12 • CC.9-12.F.IF.7	• A.1.1.3.1.1 • A.1.1.3.1.2 • A.1.1.3.1.3
Systems of Equations & Inequalities	• Use graphing, substitution, and elimination to solve systems of linear equations. • When solving by the elimination method, either add or subtract, or multiply first and then add or subtract. • Identify linear systems as having one solution, no solution, or infinitely many solutions.	• CC.9-12.A.CED.2 • CC.9-12.A.REI.5 • CC.9-12.A.REI.6 • CC.9-12.F.IF.7	• A.1.1.3.2.1 • A.1.1.3.2.2 • A.1.1.2.1.1 • A.1.1.2.1.2 • A.1.1.2.1.3
Exponents & Exponential Functions	• Use properties of exponents involving products and quotients. • Apply the product of powers property, the power of a power property, the power of a product property, the quotient of powers property, and the power of a quotient property. • Use zero and negative exponents. • Read, write, and compute with numbers in scientific notation.	• CC.9-12.N.RN.1 • CC.9-12.N.RN.2 • CC.9-12.A.SSE.3 • CC.9-12.A.SSE.2	• A.1.1.1.3.1

Polynomials & Factoring	• Identify, classify, add, subtract, and multiply polynomials. Use vertical and horizontal formats to find sums and differences. • To find products, use the distributive property, tables of products, and patterns (including the FOIL pattern, the square of a binomial pattern, and the sum and difference patterns). • Write polynomials to describe and solve real-world problems. • Solve polynomial equations. • Factor polynomials and use factoring to solve equations, to find the zeros of functions, and to find the roots of equations. • Factor polynomials completely using a variety of techniques.	• CC.9-12.A.SSE.3 • CC.9-12.A.APR.1 • CC.9-12.A.APR.3 • CC.9-12.A.APR.4 • CC.9-12.A.CED.1 • CC.9-12.A.REI.4 • CC.9-12.F.IF.7 • CC.9-12.F.IF.8 • CC.9-12.A.SSE.2	• A.1.1.1.2.1 • A.1.1.1.5.1 • A.1.1.1.5.2
Quadratic Equations	• Graph quadratic functions. • Find the axis of symmetry, the vertex, and minimum or maximum values. • Solve quadratic equations by factoring, graphing, using square roots, completing the square, and using the quadratic formula. • Determine whether a linear, exponential, or quadratic function best models a set of data.	• CC.9-12.N.Q.1 • CC.9-12.A.SSE.3 • CC.9-12.A.APR.3 • CC.9-12.A.CED.1 • CC.9-12.A.CED.2 • CC.9-12.A.CED.3 • CC.9-12.A.REI.4 • CC.9-12.A.REI.11 • CC.9-12.F.IF.4 • CC.9-12.F.IF.5 • CC.9-12.F.IF.6 • CC.9-12.F.IF.7 • CC.9-12.F.IF.8 • CC.9-12.F.IF.9 • CC.9-12.F.BF.1 • CC.9-12.F.LE.1 • CC.9-12.A.REI.7	• A.1.1.1.1.2 • A.1.1.1.5.2
Rational Expressions and Equations	• Graph square root functions. • Simplify radical expressions, including rationalizing the denominator. • Add, subtract, and multiply radicals. • Solve radical equations, including equations and extraneous solutions.	• CC.9-12.A.CED.2 • CC.9-12.A.CED.3 • CC.9-12.A.REI.2 • CC.9-12.A.REI.4 • CC.9-12.F.IF.5 • CC.9-12.F.IF.7 • CC.9-12.F.BF.3	• A.1.1.1.1.2 • A.1.1.1.5.3
